

Conceptual discussion – Smart City or Digital City

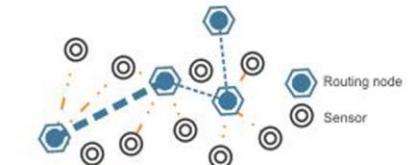

Digital City

Vehicle,asset,person & pet
monitoring & controlling

Embedded
Mobile

M2M &
wireless
sensor network

Agriculture automation

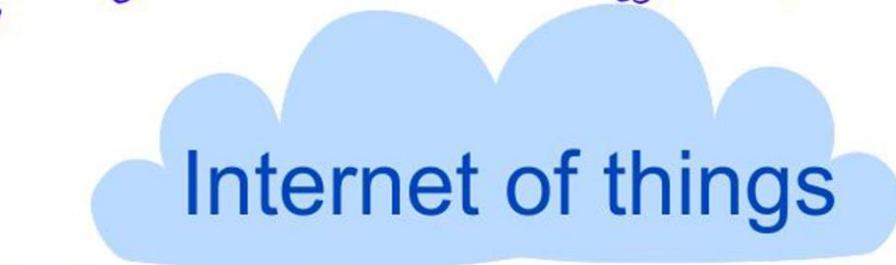

Energy consumption

Security &
surveillance

Building managment

Everyday things

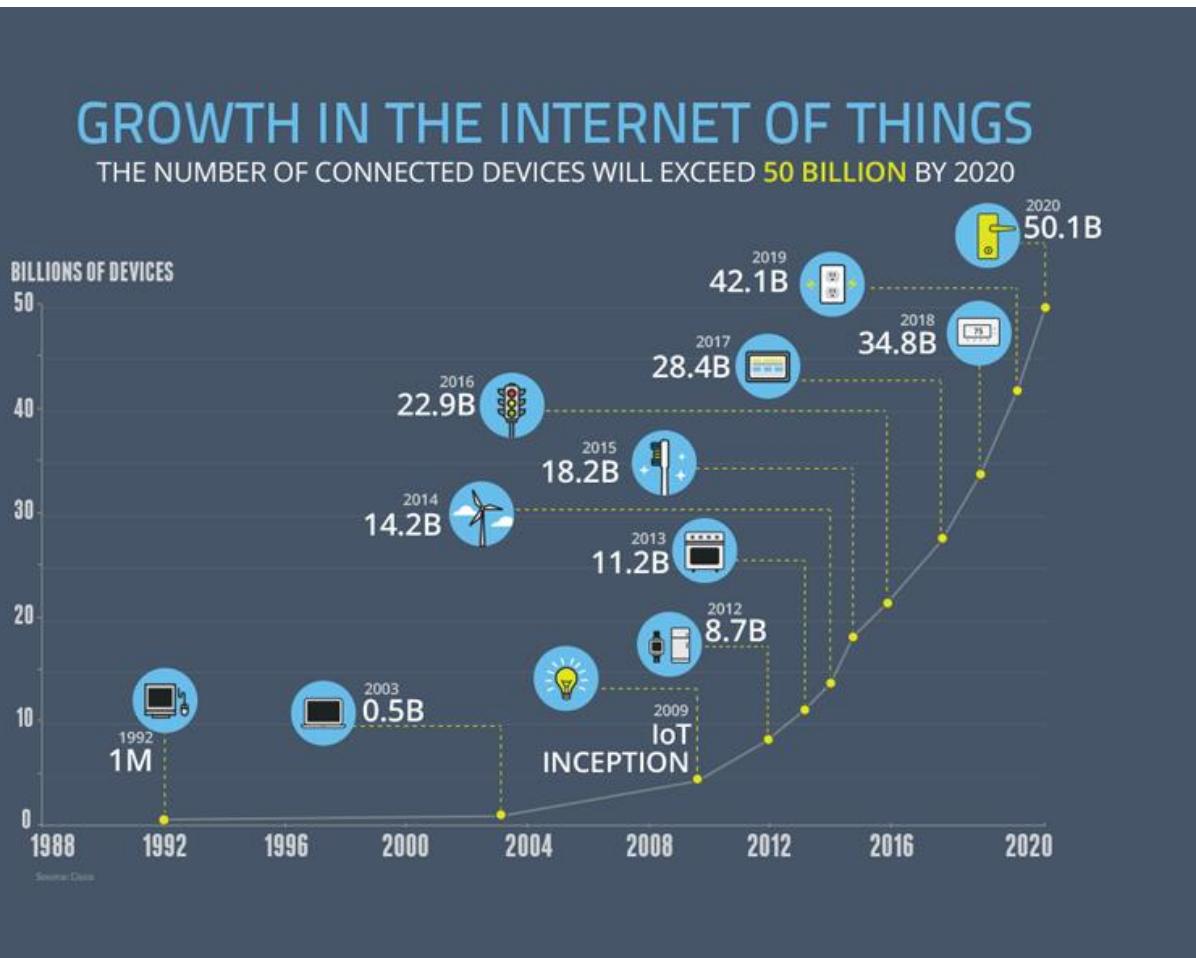

Smart homes & cities

Telemedicine & helthcare

Digital City

Smart and Human Cities

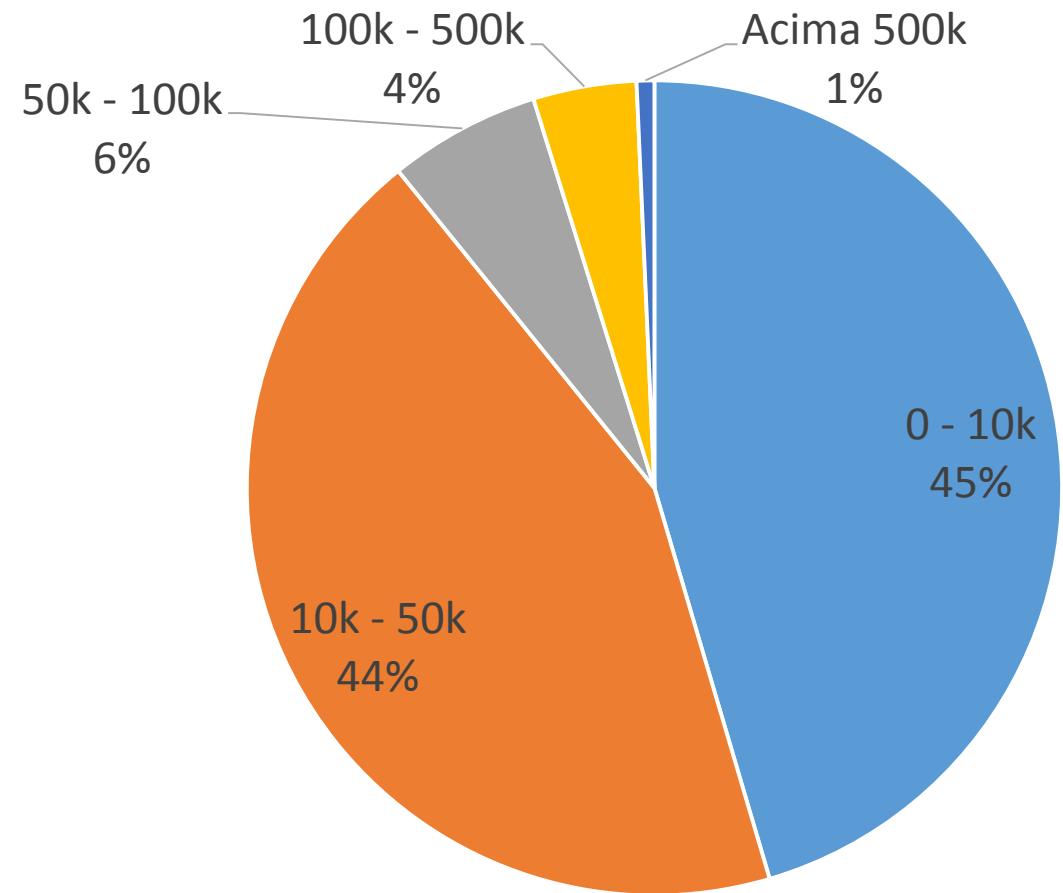

Technology as a tool

- Connect citizens
- Manage data
- Real time facts
- To broaden the vision of a problem

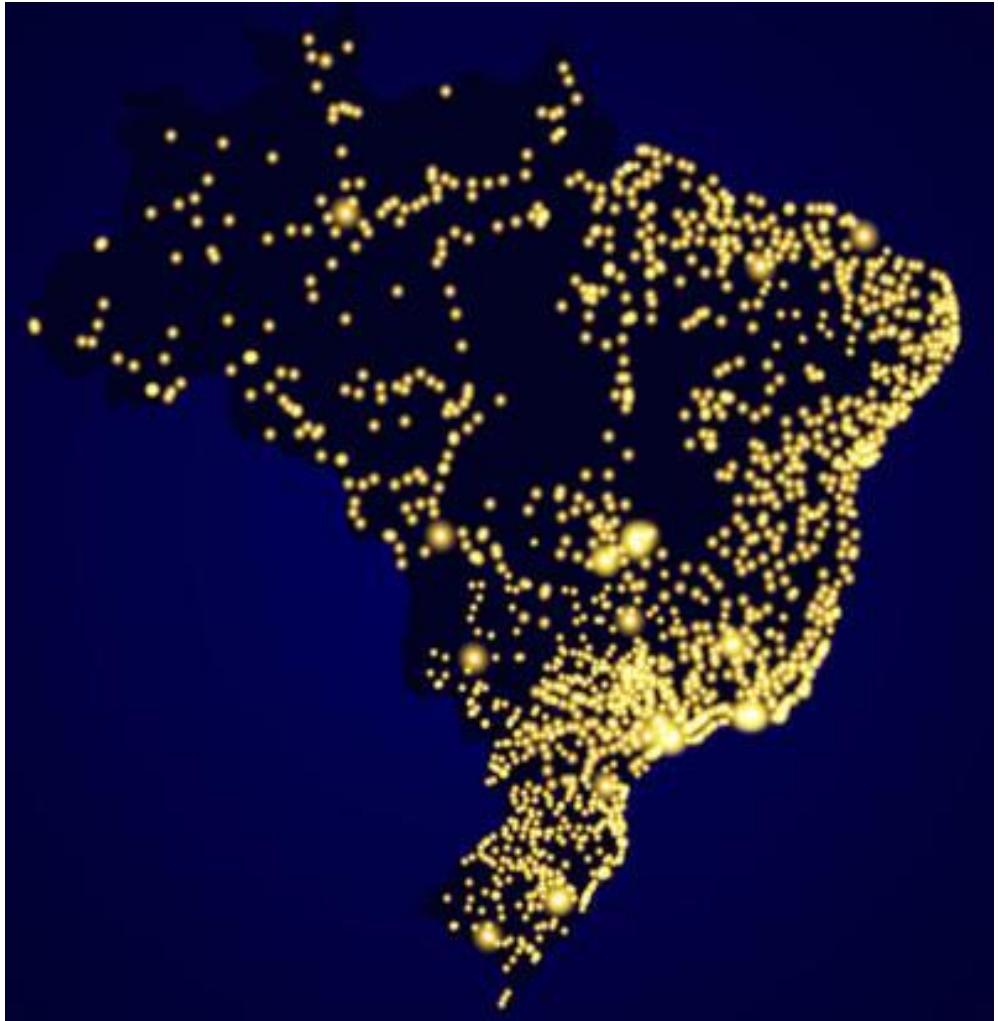

...because sometimes our cities need more than technology

Brazilian reality

Around 95% of the counties without especific funds for planning

Brazilian reality

Territorial occupation - IBGE 2010

23,8 km² Brasil

17 km² Finland

1º Southeast = 67.77 km²

2º South = 38.38 km²

3º Northeat = 27.33 km²

4º Midwest = 5,86 km²

5º North = 2,66 km²

São Paulo City 7.300 km²

Most of North Cities less than 10 km²

Continental differences

- Climate
- Territorial occupation
- Access to technology
- Social and economic development
- Relief
- Different forms of local management

O Governo do Estado publicou ontem (19) um novo decreto que declara situação de emergência para 150 municípios do Rio Grande do Norte em decorrência da seca. Esta é a terceira vez que o Executivo decreta "situação de emergência", em pouco mais de um ano, para obter mais celeridade e acesso à ajuda do governo federal. O decreto entra em vigor hoje e vale até março de 2014.

How To Make Cities More Resilient

A Handbook For Local Government Leaders

1. Put in place organization and coordination to understand and reduce disaster risk, **based on participation of citizen groups and civil society**. Build local alliances. Ensure that all departments understand their role in disaster risk reduction and preparedness.
2. **Assign a budget** for disaster risk reduction and provide incentives for homeowners, low income families, communities, businesses and the public sector to invest in reducing the risks they face.
3. Maintain up to date data on hazards and vulnerabilities. **Prepare risk assessments and use these as the basis for urban development plans and decisions**, ensure that this information and the plans for your city's resilience are readily available to the public and fully discussed with them.
4. Invest in and maintain critical infrastructure that reduces risk, such as flood drainage, adjusted where needed to cope with climate change.
5. Assess the safety of all schools and health facilities and upgrade these as necessary.
6. Apply and enforce realistic, risk compliant building regulations and land use planning principles. Identify safe land for low income citizens and upgrade informal settlements, wherever feasible.
7. Ensure that education programmes and training on disaster risk reduction are in place in schools and local communities.
8. Protect ecosystems and natural buffers to mitigate floods, storm surges and other hazards to which your city may be vulnerable. Adapt to climate change by building on good risk reduction practices.
9. **Install early warning systems and emergency management** capacities in your city and hold regular public preparedness drills.
10. After any disaster, ensure that the needs of the affected population are placed at the centre of reconstruction, with support for them and their community organizations to design and help implement responses, including rebuilding homes and livelihoods. .
