# CIMU

## Integrated Centre for Urban Mobility

Dariusz Świątek and Melissa Pokorny  
Electric Energy and Automation Engineering Department  
Polytechnic School, University of São Paulo

**USP**

- The existing infrastructure in SP
- Why to change?
- What is CIMU?
- Which are the goals?
- How it will be done?

Fig. 10

# Why to change?

- Build more infrastructure is difficult and expensive
- Isolated systems restricts the implementation of new functionalities
- There is space to improve the coordination and intelligence of the systems for the benefit to the end users
- The decision makers and managers aren't isolated like in the past (urban mobility issue)
- Will more infrastructure solve all the problems?

NO

# What will CIMU be?

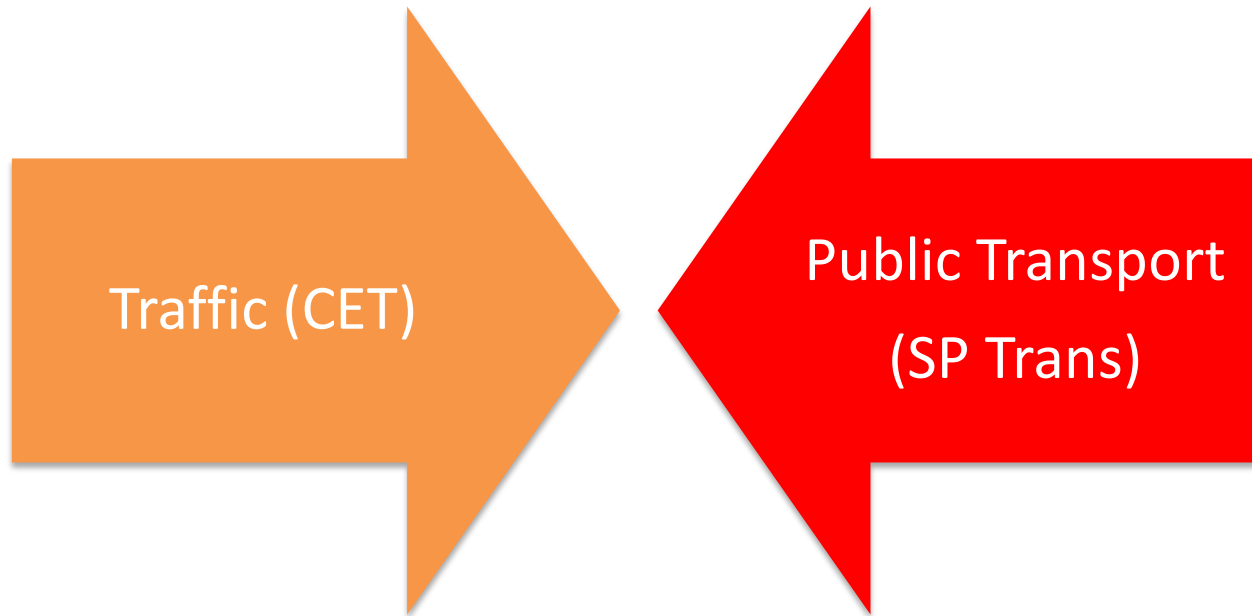

Centro Integrado de Mobilidade Urbana

**ONE** database that integrates **ALL** the data/information of traffic and transportation using systems based on **OPEN PROTOCOLS** and **OPEN STANDARDS**

# What will CIMU be?

**Integration = Visualization + Coordination + Control**

# Will CIMU solve all the problems?

# NO

# How will it help?

> safety

< journey time

> precision

> control

< enviro. damage

> information

> predictability

# Aims of CIMU

- Visualize, on a global/meta level, the information about all the ITS elements and infrastructure components to foster strategic decisions
- Automation of processes
- Deployment of new functionalities
- Provide information to the end users
- Share resources
- Lower operational costs

# How CIMU will operate?

- Field data captured in real time
- Transmission of data from the field to specific coordination and control centres
- Copy of data from the specific centres to CIMU
- Generate strategic information for decision making
- Share resources among the specific centres
- Act in certain cases

# CIMU in numbers

Fiber network	<b>1100 km</b>
Real time traffic lights	<b>3000</b>
Fixed time traffic lights	<b>3200</b>
PTZ Cameras	<b>970</b>
Fixed Cameras	<b>710</b>
Incident Detection	<b>405</b>
VMS	<b>150</b>
Height Detectors	<b>30</b>
CIMU	<b>1</b>

**CIMU - Centro de Integração de Mobilidade Urbana**  
**Prefeitura de São Paulo**

# Further possibilities:

- Parking management
- Emergency vehicles monitoring
- Hazardous cargo monitoring
- Metro/Train integration
- Metropolitan area integration

**PREFEITURA DE  
SÃO PAULO**  
TRANSPORTES

**THANK YOU**

**Electric Energy and Automation Engineering Department**  
**of the Polytechnic School**  
**of the University of São Paulo**

# Cidades inteligentes (Smart cities projects)

- Integration of traffic lights in Sao Paulo
- Maintenance of urban infrastructure/  
furniture in Sao Paulo
- MOG-LAB Laboratory  
of logistics, urban  
mobility and  
environmental  
implications - Santos
- TAX management  
automation – SP state

# Rastreabilidade

(track and trace projects)

- Pilot system of equipment and access control on restricted areas
- Traceability applied to the supply chain  
ABEC/ACAV/SINDICARE-SC/SINDUSFARMA
- Secure supply chain - FINEP

# LOGISTICS

- Management, control, financial and operational systems for ports authorities
- Automation of electronics scales
- Yard and port cargo management process (for Port Santos and Macae)
- Ports security (for Sao Paulo state dock company)
- Retroporto system
- Dashboard for logistic activates for Petrobras
- Electronic superhighway (Docks companies of Santos and Rio de Janeiro)
