

# WATER

ANIBAL  
MARIA TERESA  
PATRICIA  
OSCAR

# Ideas

- Water management needs to be focused on sustainability of the supply
- More legislation is not the solution, implementation is the keypoint
- Pollution control should be more important in the agenda
- Landuse and water management
- Awareness and attitude

# Connections

- Transportation and flood-risk areas: not to promote occupation of these areas
- Design public space that promotes infiltration to reduce peaks (increase permeability for flood control) and increase recharge of the aquifers
- Urban planning and water management
