A satellite view of Earth from space, showing the Western Hemisphere. The Amazon basin in South America is the central focus, appearing as a large, dense green area. The surrounding oceans are a deep blue, and the rest of the continents are visible in shades of green and brown. The background is the blackness of space with some stars.

# Remote Sensing of Amazon Deforestation & Forest Degradation

Em julho de 2018, o SAD detectou **778** quilômetros quadrados de desmatamento na Amazônia Legal. Neste boletim, a fração de desmatamento entre 1 e 10 hectares foi de **11%** do total detectado (**89** quilômetros quadrados). Considerando somente os alertas a partir de 10 hectares, houve aumento de **27%** em relação a julho de 2017, quando o desmatamento somou **544** quilômetros quadrados. Em julho de 2018, o desmatamento ocorreu no Pará (37%), Amazonas (21%), Rondônia (20%), Mato Grosso (17%), Acre (5%). As florestas degradadas na Amazônia Legal somaram **356** quilômetros quadrados em julho de 2018. Em julho de 2017, a degradação florestal detectada totalizou 45 quilômetros quadrados. Em julho de 2018 a degradação foi detectada nos estados do Pará (95%), Mato Grosso (3%), e Rondônia (2%).

### PROPORÇÃO DE DESMATAMENTO POR ESTADO

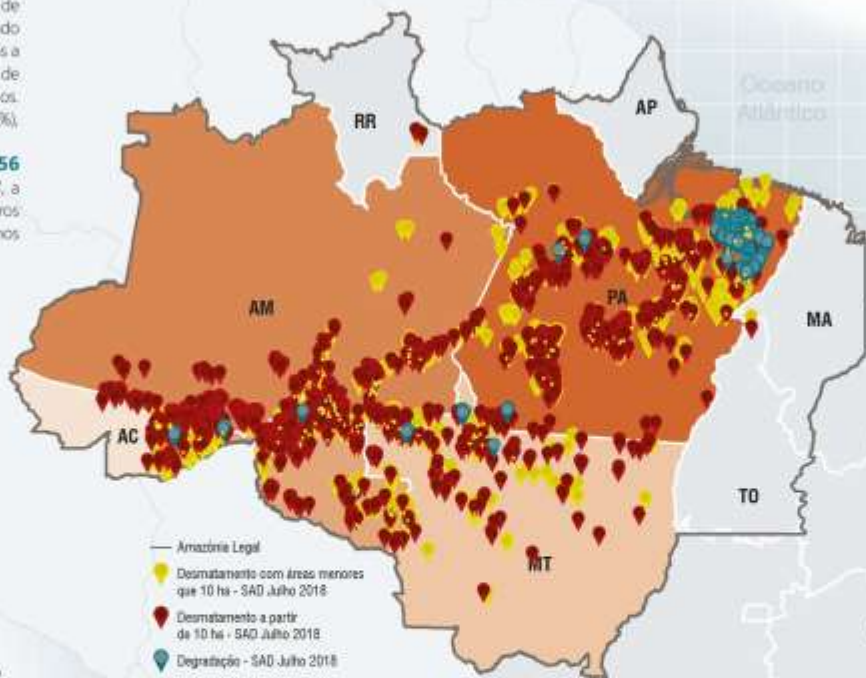

### EVOLUÇÃO DO DESMATAMENTO E DEGRADAÇÃO NA AMAZÔNIA

### GEOGRAFIA DO DESMATAMENTO

Em julho de 2018, a maioria (**62%**) do desmatamento ocorreu em áreas privadas ou sob diversos estágios de posse. O restante do desmatamento foi registrado nos Assentamentos de Reforma Agrária (**19%**), Unidades de Conservação (**15%**) e Terras Indígenas (**4%**).

# Land Use: Deforestation & Degradation

Tyukavina et al., 2017

# Deforestation Monitoring in 2018:

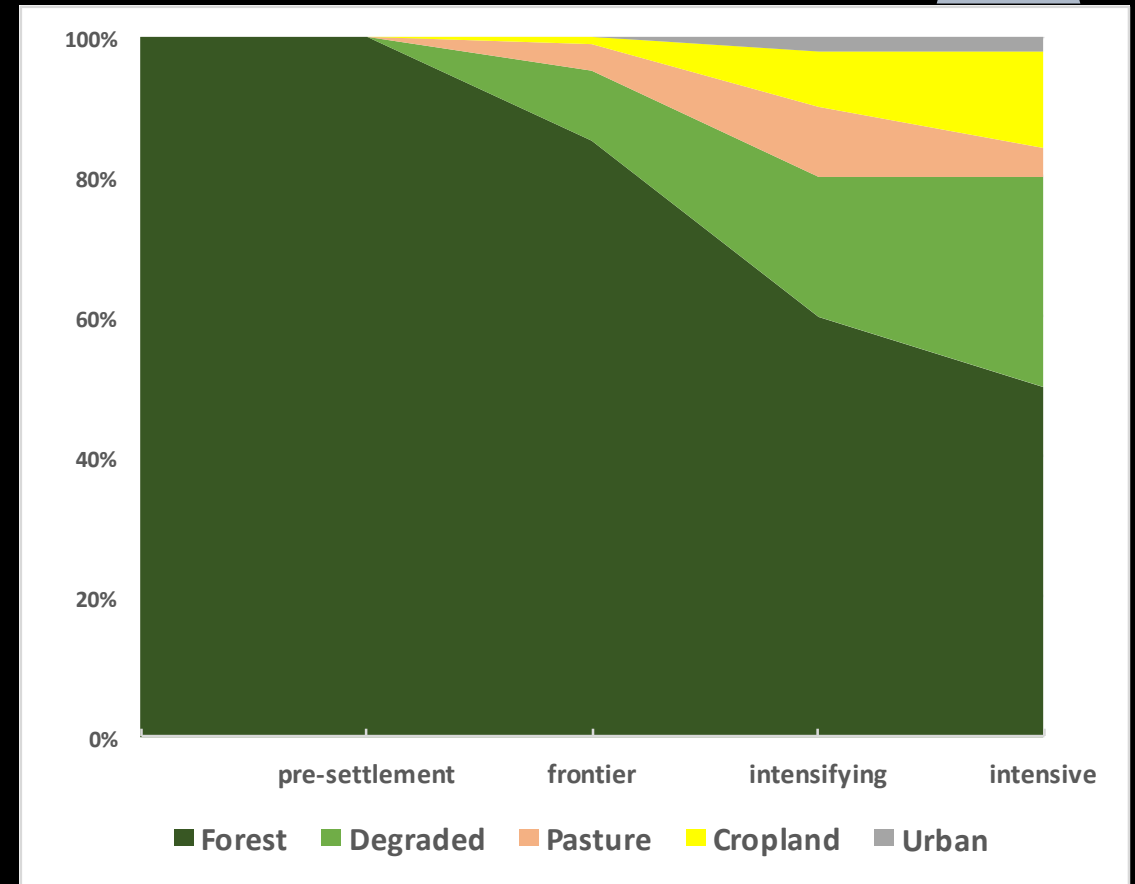

- 1) Broad use of freely-available satellite data has spurred innovation and changed the discourse at national and international levels.
  - 1) PRODES, DETER, CAR, Soy Moratorium, etc.
  - 2) REDD+
- 2) Estimates from different systems still disagree.
  - 1) Main difference is the treatment of forest degradation.
  - 2) Righting past wrongs in estimates of deforestation will help to understand patterns of land use and climate sensitivity.
- 3) Putting the Amazon in context.
  - 1) Replicating Amazon systems in the Cerrado and Mata Atlantica.
  - 2) Forecasting, managing human-dominated landscapes in the Amazon.

The map displays South America with red dots indicating sustainable landscapes in Brazil. Key cities and regions labeled include: San Cristobal, Medellin, Georgetown, Cayenne, Macapá, Manaus, Santarém, Belém, Iquitos, Leticia, Cruzelro do Sul, Porto Velho, Alta Floresta, Vilhena, Cuiabá, Vila Rica, Curitiba, and Curitiba. Countries shown include Colombia, Venezuela, Ecuador, Peru, and Brazil. The Equator is also marked.

# Forest Degradation:

- The combination of Landsat and lidar provides a powerful tool to characterize the spatial and temporal patterns of frontier development.
- Degraded forests cover a large (and growing) proportion of frontier regions.
- Frontier forests have lower carbon stocks, following decades of logging, fire, and fragmentation, even after 5+ years of recovery.
- Burned forests have lower carbon stocks than logged forests, and recover more slowly following forest degradation.
- Airborne lidar data capture fine-scale heterogeneity in forest carbon stocks over spatial scales needed for REDD+ monitoring, reporting, and verification.

Population & cattle rose exponentially between 1970-2015 in the 24 countries with most burned area, driven by urbanization and increasing stocking density.

Land use

Today

RCP4.5

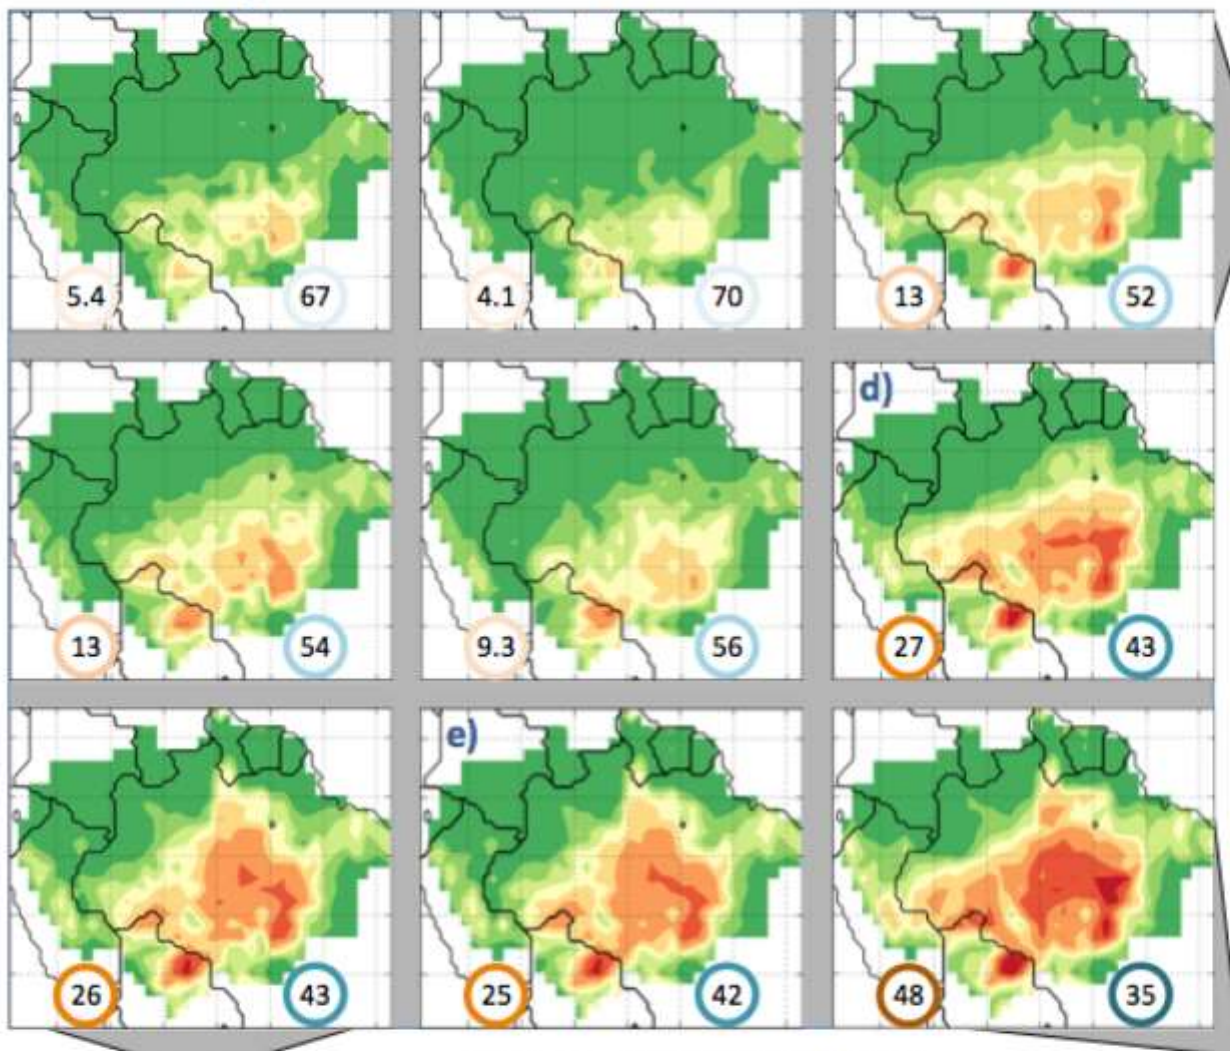

RCP8.5

Today

RCP4.5

RCP8.5

a) Fire sensitivity to land use

b) Fire sensitivity to climate

Average annual burned fraction

c) Climate-land use interaction

- 13 Total burned area ( $10^3 \text{ km}^2$ )
- 54 Percent "fire-free" forest (< 0.05% burned per year)

Alone, restricting further deforestation will not protect Amazon forests from greater fire risk in coming decades.

# Fires

- Worldwide decline in burning, including across the Amazon arc of deforestation.
- Fewer fires presents some difficult tradeoffs for conservation, land management.
- Satellite remote sensing provides a means to track risk, real-time changes, to facilitate more active management.
- Can Brazil's Forest Code serve as a vehicle to incentivize less burning in the Amazon and more burning in human-dominated landscapes across the Cerrado?
